INVESTMENT STRATEGY	The investment objective of the Scheme is to provide long-term capital appreciation/income by investing predominantly in Mid-Cap companies. The Scheme shall follow a predominantly Mid cap strategy with a minimum exposure of 65% to Mid-Cap stocks. At WhiteOak Capital AMC, our investment strategy is to invest in businesses based on stock selection and to avoid focusing on macro events. We believe in investing in good businesses at attractive valuations. These are the two critical pillars of our investment philosophy – business and valuation. A good business is one that is well managed, scalable, and generates superior returns on incremental capital. Valuation is attractive when the current market price is at a substantial discount to intrinsic value. <table><thead><tr><th>Key attributes we look for in a Business</th><th>Key factors we evaluate</th></tr></thead><tbody><tr><td>a) Superior returns on incremental capital</td><td>Industry competitive intensity Sustainable competitive advantage</td></tr><tr><td>b) Scalable long-term opportunity</td><td>Industry potential versus current size Expanding market share and scope</td></tr><tr><td>c) Strong execution and governance</td><td>Drive to create long term value Interests aligned with minority shareholders</td></tr></tbody></table> OpcoFinco Valuation Framework We use a proprietary valuation approach that has been trademarked as OpcoFinco. As shown in the extract below, under the OpcoFinco framework, a company is bifurcated into an Opco (capital-light operating company) and Finco (financing company that owns all capital investments). By deducting the invested capital from the publicly available enterprise valuation, we arrive at the value ascribed by the market to the Opco. The OpcoFinco Free Cash Flow (FCF) multiple of the business is then obtained by dividing the value of Opco with the present value of excess FCF generated. 	OpcoFinco Valuation Framework We use a proprietary valuation approach that has been trademarked as OpcoFinco. As shown in the extract below, under the OpcoFinco framework, a company is bifurcated into an Opco (capital-light operating company) and Finco (financing company that owns all capital investments). By deducting the invested capital from the publicly available enterprise valuation, we arrive at the value ascribed by the market to the Opco. The OpcoFinco Free Cash Flow (FCF) multiple of the business is then obtained by dividing the value of Opco with the present value of excess FCF generated. OpcoFinco Framework ABC Company ABC Finco Financing Company Owns all capital investments of ABC PPE Working Capital Investment Capital (IC) V(ABC FinCo) = IC ABC OpCo Operating Company Capital-light PPE rental charge (Operating lease cost) Working capital financing charge EROIC FCF (Year 1, Year 2...) V(ABC Opco) = PV(EROIC cash flows) Taxes Government EV = IC + V(EROIC) $\frac{\text{Price}}{\text{EROIC}} = \frac{V_e(\text{EROIC})}{\text{Excess RoIC FCF}}$ Abbreviations: PPE - Plant Property & Equipment, EROIC - Excess Return on Invested Capital, V(ABC FinCo) – Value of ABC FinCo, V(ABC OpCo) – Value of ABC OpCo, PV – Present Value Excess Return on Invested Capital – Return earned after subtracting the cost of capital. As the OpcoFinco Framework is based on analysis of cash flows, it avoids several distortions that can potentially emerge while using accounting multiples. Depending on the suitability the traditional valuation approaches might be used for valuation. The scheme may invest part of its portfolio in debt and money market instruments subject to permissible limits laid under SEBI (MF) Regulations and will be guided by credit quality, liquidity, interest rates outlook. The scheme may also have an exposure to derivative instruments for the purpose of hedging, portfolio balancing and optimising returns. Though every endeavour will be made to achieve the objective of the Scheme, the AMC/ Sponsors/Trustee do not guarantee that the investment objective of the Scheme will be achieved. No guaranteed returns are being offered under the Scheme.

INVESTMENT STRATEGY	The investment objective of the Scheme is to provide long term capital appreciation and generate income from a dynamically managed portfolio of equity & equity related instruments and debt & money market securities The Scheme may utilise internal proprietary model to monitor the markets to decide the asset allocation mix in various asset classes. This model may provide broad guidance regarding the relative valuation levels and scope of the asset allocation opportunities in the market. Given the dynamic nature of the market, while the Fund manager may utilise this model as a broad indicator; the Fund manager shall have the final authority to apply his/her own discretion and judgement while determining the allocation percentage, the allocation interval, and the allocation approach as may be appropriate to pursue the investment objective of the fund. The internal proprietary model may use parameters like Adjusted Price to Book Value of Equity market indices (with an overlay of ROE), Ratio of G-Sec Yield to Earning Yield of Equity market indices, VIX and Equity and Debt Momentum while deciding the Asset Allocation levels of the portfolio. This internal proprietary model may go through periodic revision (as and when required), resulting in addition or deletion of parameters and the weightages assigned to them. Illustration: - A very high Ratio of G-Sec Yield/ Earning yield of Index and Adjusted P/BV compared to long term average, indicates higher model value, may result in lower equity allocation say between 30-40%. - Ratio of G-Sec Yield/ Earning yield of Index and Adjusted P/BV closer to long term average, indicates median model value, may result in equity allocation say between 50-60%. - A very low Ratio of G-Sec Yield/ Earning yield of Index and Adjusted P/BV compared to long term average, indicates lower model value, may result in higher equity allocation say between 70-80%. Note: These are tentative numbers for illustration purpose only. The final asset allocation % will be decided based on prevailing market conditions, other parameters like VIX, Momentum etc. along with the primary indicators mentioned above. Equity Allocation: At WhiteOak Capital AMC, our investment strategy is to invest in businesses based on stock selection and to avoid focusing on macro events. We believe in investing in good businesses at attractive valuations. These are the two critical pillars of our investment philosophy – business and valuation. A good business is one that is well managed, scalable, and generates superior returns on incremental capital. Valuation is attractive when the current market price is at a substantial discount to intrinsic value.								
	<table><tr><th>Key attributes we look for in a Business</th><th>Key factors we evaluate</th></tr><tr><td>a) Superior returns on incremental capital</td><td>Industry competitive intensity Sustainable competitive advantage</td></tr><tr><td>b) Scalable long-term opportunity</td><td>Industry potential versus current size Expanding market share and scope</td></tr><tr><td>c) Strong execution and governance</td><td>Drive to create long term value Interests aligned with minority shareholders</td></tr></table>	Key attributes we look for in a Business	Key factors we evaluate	a) Superior returns on incremental capital	Industry competitive intensity Sustainable competitive advantage	b) Scalable long-term opportunity	Industry potential versus current size Expanding market share and scope	c) Strong execution and governance	Drive to create long term value Interests aligned with minority shareholders

OpcoFinco Valuation Framework We use a proprietary valuation approach that has been known as OpcoFinco. As shown in the extract below, under the OpcoFinco framework, a company is bifurcated into an Opco (capital-light operating company) and Finco (financing company that owns all capital investments). By deducting the invested capital from the publicly available enterprise valuation, we arrive at the value ascribed by the market to the Opco. The OpcoFinco Free Cash Flow (FCF) multiple of the business is then obtained by dividing the value of Opco with the present value of excess FCF generated. OpcoFinco Framework Abbreviations: PPE - Plant Property & Equipment, EROIC - Excess Return on Invested Capital, V(ABC FinCo) – Value of ABC FinCo, V(ABC OpCo) – Value of ABC OpCo, PV – Present Value Excess Return on Invested Capital – Return earned after subtracting the cost of capital. As the OpcoFinco Framework is based on analysis of cash flows, it avoids several distortions that can potentially emerge while using accounting multiples. Depending on the suitability the traditional valuation approaches might be used for valuation. Though every endeavour will be made to achieve the objective of the Scheme, the AMC/ Sponsors/Trustee do not guarantee that the investment objective of the Scheme will be achieved. No guaranteed returns are being offered under the Scheme. The scheme may invest part of its portfolio in debt and money market instruments subject to permissible limits laid under SEBI (MF) Regulations and will be guided by credit quality, liquidity, interest rates outlook. The scheme may also have an exposure to derivative instruments for the purpose of hedging, portfolio balancing and optimising returns. The scheme may seek to invest in Arbitrage opportunities in Indian Equities. The endeavor will be to ensure the allocation to equity and equity related instruments is greater than or equal to 65%, which will provide the fund with equity fund taxation, while the net equity levels will normally be between 30% to 80%. Debt Allocation: The fund management team will take an active view of the interest rate movement by keeping a close watch on various parameters of the Indian economy, as well as developments in global markets. The investment team of the AMC will, as a mitigation and risk control procedure, carry out rigorous credit evaluation of the issuer company proposed to be invested in. The credit evaluation process for an issuer includes analysis of its sector, the operating environment, business model, management, corporate governance practices, past track record and financial health. Risk Mitigation: Risk is an inherent part of the investment function. AMC has incorporated adequate safeguards to manage the various risks involved in the process of portfolio construction. Risk control would involve managing risk to keep it in line with the investment objective of the Scheme. Through position sizing and balanced portfolio construction, the fund manager shall contain and manage these risks. RISK MITIGATION FACTORS**Nature of Risk Mitigation Measures by AMC**

Nature of Risk	Risk Mitigation by AMC
For making investments in Equity and Equity Related Instruments	
Volatility	By monitoring sector / company exposure at portfolio level.
Concentration	The fund manager will endeavor to build well diversified portfolio within the overall fund specific investment strategy through diversification across stocks/sectors.
Liquidity	Periodical review of the liquidity position of each scrip (Market capitalization, average volume in the market vis – a – vis Portfolio Holding). The fund manager will control the liquidity at portfolio construction level.
For making investments in Fixed Income and Money Market Instruments	
Credit Risk	In addition to external ratings by the accredited credit rating agencies, the credit team will undertake independent credit assessment that would capture the quantitative (financial statements) and qualitative aspects (accounting policies, management quality, disclosure standards etc.) of a company to assess its fundamental credit strength and guide the investment decisions in the schemes. There is also a regulatory cap on exposure to each issuer to ensure a diversified portfolio and reduced credit risk in the portfolio.
Liquidity Risk	The schemes are envisaged to be actively managed portfolios. The liquidity and volatility of a security are an important criteria in security selection process. This ensures that liquidity risk is managed.
Additional for WhiteOak Capital Tax Saver Fund	
Investing in unrated securities	The schemes have a rigorous credit research process and as such all investments, rated or unrated, are analyzed and approved by the Investment Review Committee before investment by the scheme. Further there is a regulatory and internal cap on exposure to unrated issuers, limiting exposure to unrated securities. Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are not invested, and no return is earned thereon. The AMC has a strong operations team and well laid out processes and systems, which mitigate operational risks attached with the settlement process.
Reinvestment Risk	Reinvestment risk is an inherent feature of the portfolio management process. It may be managed, to a certain extent, by seeking to invest in securities with relatively low intermittent cash flows.

		quantitative (financial statements) and qualitative aspects (accounting policies, management quality, disclosure standards etc.) of a company to assess its fundamental credit strength and guide the investment decisions in the schemes. There is also a regulatory cap on exposure to each issuer to ensure a diversified portfolio and reduced credit risk in the portfolio.
	Liquidity Risk	The schemes are envisaged to be actively managed portfolios. The liquidity and volatility of a security are an important criterion in security selection process. This ensures that liquidity risk is managed.
	Investing in unrated securities	The schemes have a rigorous credit research process and as such all investments, rated or unrated, are analyzed and approved by the Investment Review Committee before investment by the scheme. Further there is a regulatory and internal cap on exposure to unrated issuers, limiting exposure to unrated securities.
	Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are not invested and no return is earned thereon.	The AMC has a strong operations team and well laid out processes and systems, which mitigate operational risks attached with the settlement process.
	Investing in Securitised Debt	Investment in securitized debt (especially in pool securities) is subject to prepayment risk. Reinvestment risk is an inherent feature of portfolio management process. It can be managed by investing in securities with relatively low intermittent cash flows.
	Reinvestment Risk	Reinvestment risk is an inherent feature of the portfolio management process. It may be managed, to a certain extent, by seeking to invest in securities with relatively low intermittent cash flows.
Creation of Segregated Portfolio	In case of credit event, the Scheme may create segregated portfolio of debt and money market instruments in terms of applicable SEBI Portfolio regulations/ circulars.	
Investment Strategy	As per investment objective, the Scheme will endeavour to achieve diversification across Equity, Debt, and Gold/Silver related asset classes with an aim to generate superior risk adjusted returns and provide income/ long-term capital appreciation. Investments under the Scheme will be predominantly in a mix of money market instruments, debt securities, equity & equity related instruments, Gold/ Silver related instruments including ETFs, Exchange Traded Commodities Derivatives (ETCDs), units of REITs and InvITs and such other asset classes as SEBI may prescribe from time to time. The Scheme may utilize internal proprietary model to monitor the markets to decide the asset allocation mix in various asset classes. This model may provide broad guidance regarding the relative valuation levels and scope of the asset allocation opportunities in the market. However, considering the dynamic nature of the market, the Fund manager might utilize this model as a broad indicator. Fund Manager will have the final authority to apply their discretion and judgment while determining the actual allocation percentage, the allocation interval, and the allocation approach as may be appropriate to pursue the investment objective of the Scheme.	

The internal proprietary model might use parameters like Adjusted Price to Book Value of Equity market indices (with an overlay of ROE), Ratio of G-Sec Yield to Earning Yield of Equity market indices, VIX and Equity and Debt Momentum while deciding the Asset Allocation levels of the portfolio between equities and debt. The internal model might use the valuation premium/discount of domestic and foreign equity to decide their respective allocations. Fixed income allocation will be made based on the evaluation of macroeconomic factors, market dynamics, and issuer-specific factors. The model may also use Capitalisation rates prevailing in the market to determine its allocation to REITs and INVITs. The internal model may use Equity to Adjusted Gold Ratio, Dollar Index to Gold Ratio, Gold to Oil Ratio and other such ratios to decide the allocation to gold instruments and various other commodity instruments. This internal proprietary model may undergo periodic revision (as and when required), resulting in adding or deleting parameters and the weights assigned to them.

Equity Allocation: At WhiteOak Capital AMC, our investment philosophy is to invest in businesses based on stock selection and to avoid focusing on macro events. We believe in investing in good businesses at attractive valuations. These are the two critical pillars of our investment philosophy – business and valuation. A good business is one that is well managed, scalable, and generates superior returns on incremental capital. Valuation is attractive when the current market price is at a substantial discount to intrinsic value.

Key attributes we look for in a Business	Key factors we evaluate
a) Superior returns on incremental capital	Industry competitive intensity Sustainable competitive advantage
b) Scalable long-term opportunity	Industry potential versus current size Expanding market share and scope
c) Strong execution and governance	Drive to create long term value Interests aligned with minority shareholder

OpcoFinco Valuation Framework

We use a proprietary valuation approach that has been trademarked as OpcoFinco. As shown in the extract below, under the OpcoFinco framework, a company is bifurcated into an Opco (capital-light operating company) and Finco (financing company that owns all capital investments). By deducting the invested capital from the publicly available enterprise valuation, we arrive at the value ascribed by the market to the Opco. The OpcoFinco Free Cash Flow (FCF) multiple of the business is then obtained by dividing the value of Opco with the present value of excess FCF generated.

OpcoFinco Framework

Abbreviations: PPE - Plant Property & Equipment, EROIC - Excess Return on Invested Capital, V(ABC FinCo) - Value of ABC FinCo, V(ABC OpCo) - Value of ABC OpCo, PV - Present Value
 Excess Return on Invested Capital - Return earned after subtracting the cost of capital.

	As the OpcoFinco Framework is based on analysis of cash flows, it avoids several distortions that can potentially emerge while using accounting multiples. Depending on the suitability the traditional valuation approaches might be used for valuation. Though every endeavour will be made to achieve the objective of the Scheme, the AMC/ Sponsors/Trustee do not guarantee that the investment objective of the Scheme will be achieved. No guaranteed returns are being offered under the Scheme. The scheme may invest part of its portfolio in debt and money market instruments subject to permissible limits laid under SEBI (MF) Regulations and will be guided by credit quality, liquidity, interest rates outlook. The scheme may also have an exposure to derivative instruments for the purpose of hedging, portfolio balancing and optimising returns. Debt Allocation: Debt instruments will be invested based on evaluation of macro-economic factors, market dynamics and issuer specific factors. The fund management team will take an active view of the interest rate movement by keeping a close watch on various parameters of the Indian economy, as well as developments in global markets. The investment team of the AMC will, as a mitigation and risk control procedure, carry out rigorous credit evaluation of the issuer company proposed to be invested in. Risk Mitigation Factors	Nature of Risk Mitigation Measures by AMC	
	Nature of Risk	Risk Mitigation by AMC
	For making investments in Equity and Equity Related Instruments	
	Volatility	By monitoring sector / company exposure at portfolio level.
	Concentration	The fund manager will endeavor to build well diversified portfolio within the overall fund specific investment strategy through diversification across stocks/sectors.
	Liquidity	Periodical review of the liquidity position of each scrip (Market capitalization, average volume in the market vis - a- vis Portfolio Holding). The fund manager will control the liquidity at portfolio construction level.
	For making investments in Fixed Income and Money Market Instruments	
	Credit Risk	In addition to external ratings by the accredited credit rating agencies, the credit team will undertake independent credit assessment that would capture the quantitative (financial statements) and qualitative aspects (accounting policies, management quality, disclosure standards etc.) of a company to assess its fundamental credit strength and guide the investment decisions in the schemes. There is also a regulatory cap on exposure to each issuer to ensure a diversified portfolio and reduced credit risk in the portfolio.
	Liquidity Risk	The schemes are envisaged to be actively managed portfolios. The liquidity and volatility of a security are an important criterion in security selection process. This ensures that liquidity risk is managed.
	Investing in unrated securities	The schemes have a rigorous credit research process and as such all investments, rated or unrated, are analyzed and approved by the Investment Review Committee before investment by the scheme. Further there is a

		regulatory and internal cap on exposure to unrated issuers, limiting exposure to unrated securities.								
	Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are not invested and no return is earned thereon.	The AMC has a strong operations team and well laid out processes and systems, which mitigate operational risks attached with the settlement process.								
	Investing in Securitised Debt	Investment in securitized debt (especially in pool securities) is subject to prepayment risk. Reinvestment risk is an inherent feature of portfolio management process. It can be managed by investing in securities with relatively low intermittent cash flows.								
	Reinvestment Risk	Reinvestment risk is an inherent feature of the portfolio management process. It may be managed, to a certain extent, by seeking to invest in securities with relatively low intermittent cash flows.								
Creation of Segregated Portfolio	In case of credit event, the Scheme may create segregated portfolio of debt and money market instruments in terms of applicable SEBI Portfolio regulations/ circulars.									
Investment Strategy	As per investment objective, the Scheme will endeavour to achieve long term capital appreciation by investing across Large Cap, Mid Cap & Small Cap Companies. The Scheme will maintain minimum exposure of 25% of its corpus to each of the market capitalisations. The Scheme will try to achieve diversification across key sectors. The Scheme seeks to capture potential opportunities available in all three, i.e., large, mid & small cap space. At WhiteOak Capital AMC, our investment strategy is to invest in businesses based on stock selection and to avoid focusing on macro events. We believe in investing in good businesses at attractive valuations. These are the two critical pillars of our investment philosophy – business and valuation. A good business is one that is well managed, scalable, and generates superior returns on incremental capital. Valuation is attractive when the current market price is at a substantial discount to intrinsic value. <table><tr><th>Key attributes we look for in a Business</th><th>Key factors we evaluate</th></tr><tr><td>a) Superior returns on incremental capital</td><td>Industry competitive intensity Sustainable competitive advantage</td></tr><tr><td>b) Scalable long-term opportunity</td><td>Industry potential versus current size Expanding market share and scope</td></tr><tr><td>c) Strong execution and governance</td><td>Drive to create long term value Interests aligned with minority shareholders</td></tr></table> OpcoFinco Valuation Framework We use a proprietary valuation approach that has been trademarked as OpcoFinco. As shown in the extract below, under the OpcoFinco framework, a company is bifurcated into an Opco (capital-light operating company) and Finco (financing company that owns all capital investments). By deducting the invested capital from the publicly available enterprise valuation, we arrive at the value ascribed by the market to the Opco. The OpcoFinco Free Cash Flow (FCF) multiple of the business is then obtained by dividing the value of Opco with the present value of excess FCF generated.  Excess Return on Invested Capital – Return earned after subtracting the cost of capital.

As the OpcoFinco Framework is based on analysis of cash flows, it avoids several distortions that can potentially emerge while using accounting multiples. Depending on the suitability the traditional valuation approaches might be used for valuation.

Though every endeavour will be made to achieve the objective of the Scheme, the AMC/ Sponsors/Trustee do not guarantee that the investment objective of the Scheme will be achieved. No guaranteed returns are being offered under the Scheme.

The scheme may invest part of its portfolio in debt and money market instruments subject to permissible limits laid under SEBI (MF) Regulations and will be guided by credit quality, liquidity, interest rates outlook. Investment Strategy	The investment objective of the Scheme is to generate long term capital appreciation from a portfolio of equity and equity related instruments of predominantly large cap and mid-cap companies. At all times, the portfolio shall have a minimum of 35% exposure to each of Large and Mid-cap companies. Our investment approach of bottom-up stock selection is well applicable across sectors and market capitalisations. The Scheme will mainly focus on maintaining a reasonably diversified portfolio at all times, However the exposure to market capitalizations will be decided based on our internal assessment & research on an ongoing basis. At WhiteOak Capital AMC, our investment strategy is to invest in businesses based on stock selection and to avoid focusing on macro events. We believe in investing in good businesses at attractive valuations. These are the two critical pillars of our investment philosophy – business and valuation. A good business is one that is well managed, scalable, and generates superior returns on incremental capital. Valuation is attractive when the current market price is at a substantial discount to intrinsic value. <table><tr><th>Key attributes we look for in a Business</th><th>Key factors we evaluate</th></tr><tr><td>a) Superior returns on incremental capital</td><td>Industry competitive intensity Sustainable competitive advantage</td></tr><tr><td>b) Scalable long-term opportunity</td><td>Industry potential versus current size Expanding market share and scope</td></tr><tr><td>c) Strong execution and governance</td><td>Drive to create long term value Interests aligned with minority shareholders</td></tr></table> OpcoFinco Valuation Framework We use a proprietary valuation approach that has been trademarked as OpcoFinco. As shown in the extract below, under the OpcoFinco framework, a company is bifurcated into an Opco (capital-light operating company) and Finco (financing company that owns all capital investments). By deducting the invested capital from the publicly available enterprise valuation, we arrive at the value ascribed by the market to the Opco. The OpcoFinco Free Cash Flow (FCF) multiple of the business is then obtained by dividing the value of Opco with the present value of excess FCF generated. OpcoFinco Framework ABC Company ABC Finco Financing Company Owns all capital investments of ABC ABC OpCo Operating Company Capital-light PPE Working Capital Investment Capital (IC) V(ABC FinCo) = IC EROIC FCF (Year 1, Year 2,...) V(ABC Opco) = PV(EROIC cash flows) Taxes Government EV = IC + V(EROIC) $\frac{Price}{EROIC} = \frac{V_m(EROIC)}{Excess\ RoIC\ FCF}$ Abbreviations: PPE - Plant Property & Equipment, EROIC - Excess Return on Invested Capital, V(ABC FinCo) – Value of ABC FinCo, V(ABC OpCo) – Value of ABC OpCo, PV – Present Value . Excess Return on Invested Capital – Return earned after subtracting the cost of capital. As the OpcoFinco Framework is based on analysis of cash flows, it avoids several distortions that can potentially emerge while using accounting multiples. Depending on the suitability the traditional valuation approaches might be used for valuation. The scheme may invest part of its portfolio in debt and money market instruments subject to permissible limits laid under SEBI (MF) Regulations and will be guided by credit quality, liquidity, interest rates outlook. The scheme may also have an exposure to derivative instruments for the purpose of hedging, portfolio balancing and optimising returns. Though every endeavour will be made to achieve the objective of the Scheme, the AMC/ Sponsors/Trustee do not guarantee that the investment objective of the Scheme will be achieved. No guaranteed returns are being offered under the Scheme. Risk Mitigation Factors	Nature of Risk Mitigation Measures by AMC	
	Nature of Risk	Risk Mitigation by AMC
	For making investments in Equity and Equity Related Instruments	
	Volatility	By monitoring sector / company exposure at portfolio level.
	Concentration	The fund manager will endeavor to build well diversified portfolio within the overall fund specific investment strategy through diversification across stocks/sectors.
	Liquidity	Periodical review of the liquidity position of each scrip (Market capitalization, average volume in the market vis - a- vis Portfolio Holding). The fund manager will control the liquidity at portfolio construction level.
	For making investments in Fixed Income and Money Market Instruments	
	Credit Risk	In addition to external ratings by the accredited credit rating agencies, the credit team will undertake independent credit assessment that would capture the quantitative (financial statements) and qualitative aspects (accounting policies, management quality, disclosure standards etc.) of a company to assess its fundamental credit strength and guide the investment decisions in the schemes. There is also a regulatory cap on exposure to each issuer to ensure a diversified portfolio and reduced credit risk in the portfolio.
	Liquidity Risk	The schemes are envisaged to be actively managed portfolios. The liquidity and volatility of a security are an important criterion in security selection process. This ensures that liquidity risk is managed.
	Investing in unrated securities	The schemes have a rigorous credit research process and as such all investments, rated or unrated, are analyzed and approved by the Investment Review Committee before investment by the scheme. Further there is a regulatory and internal cap on exposure to unrated issuers, limiting exposure to unrated securities.
	Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are not invested and no return is earned thereon.	The AMC has a strong operations team and well laid out processes and systems, which mitigate operational risks attached with the settlement process.
	Investing in Securitised Debt	Investment in securitized debt (especially in pool securities) is subject to prepayment risk. Reinvestment risk is an inherent feature of portfolio management process. It can be managed by investing in securities with relatively low intermittent cash flows.
	Reinvestment Risk	Reinvestment risk is an inherent feature of the portfolio management process. It may be managed, to a certain

		extent, by seeking to invest in securities with relatively low intermittent cash flows.								
Creation of Segregated Portfolio	In case of credit event, the Scheme may create segregated portfolio of debt and money market instruments in terms of applicable SEBI Portfolio regulations/ circulars.									
Investment Strategy	The primary objective of the scheme is to provide long term capital appreciation and generate income by investing in a balanced portfolio of equity & equity related instruments and debt & money market securities. However, there can be no assurance that the investment objective of the Scheme will be realized. Equity Allocation: At WhiteOak Capital AMC, our investment philosophy is to invest in businesses based on stock selection and to avoid focusing on macro events. We believe in investing in good businesses at attractive valuations. These are the two critical pillars of our investment philosophy – business and valuation. A good business is one that is well managed, scalable, and generates superior returns on incremental capital. Valuation is attractive when the current market price is at a substantial discount to intrinsic value. <table><tr><th>Key attributes we look for in a Business</th><th>Key factors we evaluate</th></tr><tr><td>a) Superior returns on incremental capital</td><td>Industry competitive intensity Sustainable competitive advantage</td></tr><tr><td>b) Scalable long-term opportunity</td><td>Industry potential versus current size Expanding market share and scope</td></tr><tr><td>c) Strong execution and governance</td><td>Drive to create long term value Interests aligned with minority shareholder</td></tr></table> OpcoFinco Valuation Framework We use a proprietary valuation approach that has been trademarked as OpcoFinco. As shown in the extract below, under the OpcoFinco framework, a company is bifurcated into an Opco (capital-light operating company) and Finco (financing company that owns all capital investments). By deducting the invested capital from the publicly available enterprise valuation, we arrive at the value ascribed by the market to the Opco. The OpcoFinco Free Cash Flow (FCF) multiple of the business is then obtained by dividing the value of Opco with the present value of excess FCF generated. OpcoFinco Framework OpcoFinco Framework The diagram illustrates the OpcoFinco Framework. At the top is 'ABC Company'. It branches into 'ABC FinCo Financing Company' (owns all capital investments of ABC) and 'ABC OpCo Operating Company Capital-light'. 'ABC FinCo' provides 'PPE' (Plant Property & Equipment) to 'ABC OpCo' in exchange for a 'PPE rental charge (Operating lease cost)'. 'ABC FinCo' also provides 'Working Capital' to 'ABC OpCo' in exchange for a 'Working capital financing charge'. 'ABC OpCo' pays 'Taxes' to the 'Government'. 'ABC FinCo' holds 'Invested Capital (IC)' with the formula $V(ABC\ FinCo) = IC$. 'ABC OpCo' generates 'EROIC FCF_{year1, year2, ...}' with the formula $V(ABC\ OpCo) = PV(EROIC\ cash\ flows)$. At the bottom, the formulas for Enterprise Value (EV) and Price EROIC are given: $EV = IC + V(EROIC)$ and $Price\ EROIC = \frac{V_0(EROIC)}{Excess\ RoIC\ FCF}$. Abbreviations: PPE - Plant Property & Equipment, EROIC - Excess Return on Invested Capital, V(ABC FinCo) - Value of ABC FinCo, V(ABC OpCo) - Value of ABC OpCo, PV - Present Value Excess Return on Invested Capital - Return earned after subtracting the cost of capital.		Key attributes we look for in a Business	Key factors we evaluate	a) Superior returns on incremental capital	Industry competitive intensity Sustainable competitive advantage	b) Scalable long-term opportunity	Industry potential versus current size Expanding market share and scope	c) Strong execution and governance	Drive to create long term value Interests aligned with minority shareholder

a) Superior returns on incremental capital	Industry competitive intensity Sustainable competitive advantage

c) Strong execution and governance	Drive to create long term value Interests aligned with minority shareholder									
As the OpcoFinco Framework is based on analysis of cash flows, it avoids several distortions that can potentially emerge while using accounting multiples. Depending on the suitability the traditional valuation approaches might be used for valuation.										

	Though every endeavour will be made to achieve the objective of the Scheme, the AMC/ Sponsors/Trustee do not guarantee that the investment objective of the Scheme will be achieved. No guaranteed returns are being offered under the Scheme. The scheme may invest part of its portfolio in debt and money market instruments subject to permissible limits laid under SEBI (MF) Regulations and will be guided by credit quality, liquidity, interest rates outlook. The scheme may also have an exposure to derivative instruments for the purpose of hedging, portfolio balancing and optimising returns. Debt Allocation: Debt instruments will be invested based on evaluation of macro economic factors, market dynamics and issuer specific factors. The fund management team will take an active view of the interest rate movement by keeping a close watch on various parameters of the Indian economy, as well as developments in global markets. The investment team of the AMC will, as a mitigation and risk control procedure, carry out rigorous credit evaluation of the issuer company proposed to be invested in. The credit evaluation process for an issuer includes analysis of its sector, the operating environment, business model, management, corporate governance practices, past track record and financial health.

Risk Profile of the Scheme	The Scheme will invest at least 80% of its net assets in Equity and Equity related instruments of Banks & companies engaged in financial services sector. Investment in the scheme carries the risk regarding non-diversification of the portfolio due to the investment universe mainly limited to instruments of Financial Services Sector and hence, the scope for diversification could be limited at times and the concentration is expected to be high to the instruments of Financial Services Sector. Further, the volatility and/or adverse performance of said sector and/or of the scripts belonging to this sector would have a material adverse bearing on the performance of the Scheme. Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme specific Risk Factors are summarized below: The Scheme carries risks associated with investing in Equity and Equity related instruments, derivatives, Repo in corporate Bond, REITs and InvITs, foreign securities, Securities Lending, instruments with special features, Credit Default Swaps and Risks associated with Segregated portfolio. Risk Mitigation Factors	Nature of Risk Mitigation Measures by AMC									
	Nature of Risk	Risk Mitigation by AMC								
	For making investments in Equity and Equity Related Instruments									
	Volatility	By monitoring sector / company exposure at portfolio level.								
	Concentration	The Scheme is mandated to construct a portfolio predominantly of equity and equity related instruments of Banks & companies engaged in Financial Services Sector. However, to achieve diversification, the Scheme may also invest up to 20% of the assets in instruments of companies other than financial service sector. This will help mitigating the risk associated with investments in the said sector.								
	Liquidity	Periodical review of the liquidity position of each scrip (Market capitalization, average volume in the market vis – a- vis Portfolio Holding). The fund manager will control the liquidity at portfolio construction level.								
	For making investments in Fixed Income and Money Market Instruments									
	Credit Risk	In addition to external ratings by the accredited credit rating agencies, the credit team will undertake independent credit assessment that would capture the quantitative (financial statements) and qualitative aspects (accounting policies, management quality, disclosure standards etc.) of a company to assess its fundamental credit strength and guide the investment decisions in the schemes. There is also a regulatory cap on exposure to each issuer to ensure a diversified portfolio and reduced credit risk in the portfolio.								
	Liquidity Risk	The schemes are envisaged to be actively managed portfolios. The liquidity and volatility of a security are an important criterion in security selection process. This ensures that liquidity risk is managed.								
	Investing in unrated securities	The schemes have a rigorous credit research process and as such all investments, rated or unrated, are analyzed and approved by the Investment Review Committee before investment by the scheme. Further there is a regulatory and internal cap on exposure to unrated issuers, limiting exposure to unrated securities.								
Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are not invested and no return is earned thereon.	The AMC has a strong operations team and well laid out processes and systems, which mitigate operational risks attached with the settlement process.									
Investing in Securitised Debt	Investment in securitized debt (especially in pool securities) is subject to prepayment risk. Reinvestment risk is an inherent feature of portfolio management process. It can be managed by investing in securities with relatively low intermittent cash flows.									
Reinvestment Risk	Reinvestment risk is an inherent feature of the portfolio management process. It may be managed, to a certain extent, by seeking to invest in securities with relatively low intermittent cash flows.									
Creation of Segregated Portfolio	In case of credit event, the Scheme may create segregated portfolio of debt and money market instruments in terms of applicable SEBI Portfolio regulations/ circulars.									
Investment Strategy	Being a thematic fund, the Scheme will invest minimum 80% of its net assets in equity and equity related instruments of Banks & companies engaged in Financial Services Sector. Further, in order to achieve a diversification in the Scheme will invest upto 20% of its net assets in companies other than those engaged in Financial Services Sector. A portion of the Scheme will also be invested in IPOs, emerging sectors and other primary market offerings that meet our investment criteria. The Scheme will follow a bottom-up approach to stock-picking and choose companies which are expected to get benefitted from the growth of Banking & Financial Services Sector. The Scheme will invest in companies engaged in the Financial Services sector from Sector list provided by AMFI/SEBI / NSE. The Financial Services Sector companies include: • Banks & Non-Banking Financial Institutions • Stock Broking & Allied Entities, Asset Management Company(s), Depositories, Credit Rating Agencies, Clearing Houses and Other Intermediaries • Financial Technology (Fintech), Exchanges and Data Platforms • Investment Banking Companies • Wealth Management Entities • Distributors of Financial Products • Insurance Companies - General & Life • Companies engaged in the Financial Services sector from Sector list provided by AMFI/SEBI in Industry Classification data or other financial services as identified by Fund Manager. The Fund Manager may from time to time review the investment strategy and will modify the same if required, considering the best interest of unitholders. However, there is no assurance that the fund manager will make such modifications in the portfolio. At WhiteOak Capital AMC, our investment strategy is to invest in businesses based on stock selection and to avoid focusing on macro events. We believe in investing in good businesses at attractive valuations. These are the two critical pillars of our investment philosophy – business and valuation. A good business is one that is well managed, scalable, and generates superior returns on incremental capital. Valuation is attractive when the current market price is at a substantial discount to intrinsic value. <table><tr><th>Key attributes we look for in a Business</th><th>Key factors we evaluate</th></tr><tr><td>a) Superior returns on incremental capital</td><td>Industry competitive intensity Sustainable competitive advantage</td></tr><tr><td>b) Scalable long-term opportunity</td><td>Industry potential versus current size Expanding market share and scope</td></tr><tr><td>c) Strong execution and governance</td><td>Drive to create long term value Interests aligned with minority shareholders</td></tr></table> OpcoFinco Valuation Framework We use a proprietary valuation approach that has been trademarked as OpcoFinco. As shown in the extract below, under the OpcoFinco framework, a company is bifurcated into an Opco (capital-light operating company) and Finco (financing company that owns all capital investments). By deducting the invested capital from the publicly available enterprise valuation, we arrive at the value ascribed by the market to the Opco. The OpcoFinco Free Cash Flow (FCF) multiple of the business is then obtained by dividing the value of Opco with the present value of excess FCF generated. As the OpcoFinco Framework is based on analysis of cash flows, it avoids several distortions that can potentially emerge while using accounting multiples. Depending on the suitability the traditional valuation approaches might be used for valuation. The scheme may invest part of its portfolio in debt and money market instruments subject to permissible limits laid under SEBI (MF) Regulations and will be guided by credit quality, liquidity, interest rates outlook. The scheme may also have an exposure to derivative instruments for the purpose of hedging, portfolio balancing and optimising returns. Though every endeavour will be made to achieve the objective of the Scheme, the AMC/ Sponsors/Trustee do not guarantee that the investment objective of the Scheme will be achieved. No guaranteed returns are being offered under the Scheme.

Risk Mitigation Factors	Nature of Risk Mitigation Measures by AMC									
	Nature of Risk	Risk Mitigation by AMC								
	For making investments in Equity and Equity Related Instruments									
	Volatility	By monitoring sector / company exposure at portfolio level.								
	Concentration	The Scheme is mandated to construct a portfolio predominantly of equity and equity related instruments of companies engaged in the Pharma and Healthcare sectors. However, to achieve diversification the Scheme may also invest up to 20% of the assets in companies engaged in businesses other than Pharma and Healthcare sectors. This will help mitigating the risk associated with investments in Pharma and Healthcare sector stocks.								
	Liquidity	Periodical review of the liquidity position of each scrip (Market capitalization, average volume in the market vis – a- vis Portfolio Holding). The fund manager will control the liquidity at portfolio construction level.								
	For making investments in Fixed Income and Money Market Instruments									
	Credit Risk	In addition to external ratings by the accredited credit rating agencies, the credit team will undertake independent credit assessment that would capture the quantitative (financial statements) and qualitative aspects (accounting policies, management quality, disclosure standards etc.) of a company to assess its fundamental credit strength and guide the investment decisions in the schemes. There is also a regulatory cap on exposure to each issuer to ensure a diversified portfolio and reduced credit risk in the portfolio.								
	Liquidity Risk	The schemes are envisaged to be actively managed portfolios. The liquidity and volatility of a security are an important criterion in security selection process. This ensures that liquidity risk is managed.								
	Investing in unrated securities	The schemes have a rigorous credit research process and as such all investments, rated or unrated, are analyzed and approved by the Investment Review Committee before investment by the scheme. Further there is a regulatory and internal cap on exposure to unrated issuers, limiting exposure to unrated securities.								
Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are not invested and no return is earned thereon.	The AMC has a strong operations team and well laid out processes and systems, which mitigate operational risks attached with the settlement process.									
Investing in Securitised Debt	Investment in securitized debt (especially in pool securities) is subject to prepayment risk. Reinvestment risk is an inherent feature of portfolio management process. It can be managed by investing in securities with relatively low intermittent cash flows.									
Reinvestment Risk	Reinvestment risk is an inherent feature of the portfolio management process. It may be managed, to a certain extent, by seeking to invest in securities with relatively low intermittent cash flows.									
Creation of Segregated Portfolio	In case of credit event, the Scheme may create segregated portfolio of debt and money market instruments in terms of applicable SEBI Portfolio regulations/ circulars.									
Investment Strategy	Being a thematic fund, the Scheme will invest minimum 80% of its net assets in equity and equity related instruments of Pharma & Healthcare companies. Further, in order to achieve a diversification in the Scheme will invest upto 20% of its net assets in companies other than those engaged in Pharma & Healthcare Sector. A portion of the Scheme will also be invested in IPOs, emerging sectors and other primary market offerings that meet our investment criteria. The Scheme will be actively managed and will follow a bottom-up approach to stock-picking and choose companies which are expected to get benefitted from the growth in the Pharma and Healthcare space. The Scheme will invest in companies engaged in the Pharma and Healthcare sector from the Sector list provided by AMFI/SEBI and stated under S&P BSE Healthcare Index (TRI). # Pharma and Healthcare sector companies include : • Pharmaceutical & Biotechnology • Healthcare Services / Healthcare Service Provider • Healthcare Research, Analytics & Technology • Hospitals & Diagnostics • Healthcare Research and/or Manufacturing Services related to Healthcare sector. • Medical Equipment & Supplies • And any other business or service directly or indirectly forming part of the pharma, Healthcare and allied sectors forming part of the Benchmark Index. The Fund Manager may from time to time review the investment strategy and will modify the same if required, considering the best interest of unitholders. However, there is no assurance that the fund manager will make such modifications in the portfolio. At WhiteOak Capital AMC, our investment strategy is to invest in businesses based on stock selection and to avoid focusing on macro events. We believe in investing in good businesses at attractive valuations. These are the two critical pillars of our investment philosophy – business and valuation. A good business is one that is well managed, scalable, and generates superior returns on incremental capital. Valuation is attractive when the current market price is at a substantial discount to intrinsic value. <table><tr><th>Key attributes we look for in a Business</th><th>Key factors we evaluate</th></tr><tr><td>a) Superior returns on incremental capital</td><td>Industry competitive intensity Sustainable competitive advantage</td></tr><tr><td>b) Scalable long-term opportunity</td><td>Industry potential versus current size Expanding market share and scope</td></tr><tr><td>c) Strong execution and governance</td><td>Drive to create long term value Interests aligned with minority shareholders</td></tr></table> OpcoFinco Valuation Framework We use a proprietary valuation approach that has been trademarked as OpcoFinco. As shown in the extract below, under the OpcoFinco framework, a company is bifurcated into an Opco (capital-light operating company) and Finco (financing company that owns all capital investments). By deducting the invested capital from the publicly available enterprise valuation, we arrive at the value ascribed by the market to the Opco. The OpcoFinco Free Cash Flow (FCF) multiple of the business is then obtained by dividing the value of Opco with the present value of excess FCF generated. Though every endeavour will be made to achieve the objective of the Scheme, the AMC/ Sponsors/Trustee do not guarantee that the investment objective of the Scheme will be achieved. No guaranteed returns are being offered under the Scheme. The scheme may invest part of its portfolio in debt and money market instruments subject to permissible limits laid under SEBI (MF) Regulations and will be guided by credit quality, liquidity, interest rates outlook. CONCEPT OF MACAULAY'S DURATION	The Macaulay duration is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price. The Macaulay duration calculates the weighted average time before a bondholder would receive the bond's cash flows. The Macaulay duration of the portfolio is essentially an average of the duration of bonds within the portfolio, accounting for what percentage of the total portfolio each bond represents. The Macaulay duration of a zero-coupon bond would be equal to the bond's maturity Macaulay duration can be calculated as follows : $\text{Macaulay Duration} = \frac{\sum_{t=1}^n \frac{t * C}{(1+y)^t} + \frac{n * M}{(1+y)^n}}{\text{Current Bond Price}}$ Where : t= respective time period C= periodic coupon payment y = periodic yield n= total number of periods M = maturity value Current Bond Price = Present value of cash flows

AMC has incorporated adequate safeguards to manage risk in the portfolio construction process. Risk control would involve managing risk in order to keep it in line with the investment objective of the Scheme. The risk control process involves identifying & measuring the risk through various risk measurement tools like but not limited to tracking error, concentration limits, stress test etc. The AMC has systems which enables the fund manager to calculate various risk ratios, average duration. All investments in unrated papers will be as per the parameters define by the Board of AMC & Trustee Company. Further, all investment in unrated papers are periodically reviewed by Investment Review Committee.

For risk control, the following may be noted:

Credit Risk:

In addition to external ratings by the accredited credit rating agencies, the credit team will undertake independent credit assessment that would capture the quantitative (financial statements) and qualitative aspects (accounting policies, management quality, disclosure standards etc.) of a company to assess its fundamental credit strength and guide the investment decisions in the schemes. There is also a regulatory cap on exposure to each issuer to ensure a diversified portfolio and reduced credit risk in the portfolio.

Liquidity Risk

The schemes are envisaged to be actively managed portfolios. The liquidity and volatility of a security are an important criteria in security selection process. This ensures that liquidity risk is managed.

Investing in unrated securities

The schemes have a rigorous credit research process and as such all investments, rated or unrated, are analyzed and approved by the Investment Review Committee before investment by the scheme. Further there is a regulatory and internal cap on exposure to unrated issuers, limiting exposure to unrated securities.

Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are not invested and no return is earned thereon for which the AMC has a strong operations team and well laid out processes and systems, which mitigate operational risks attached with the settlement process.

Investing in Securitised Debt

Flex SIP Enrolment Details:

Scheme Name	XXXX XXXX Fund
Investment Date & Frequency of flex SIP	15th of every month (T)
Fixed instalment amount	Rs. 5,000/-
Number of instalments	36
Total enrolment amount	Rs. 5000 * 36 = Rs. 1,80,000
Period	January 2022 to December 2024

Q1. How would the Flex SIP instalment be calculated?

A1. Calculation of Flex SIP instalment amount for instance on the date of the fourth instalment i.e. April 15, 2022. Total units allotted up to the date of previous instalment i.e. March 15, 2022 is assumed as 685.50. The NAV of the Scheme on April 13, 2022 (T-2) is assumed as Rs. 18/- per unit. Hence the market value of the investment in the Scheme on April 13, 2022 is Rs. 12,339 [685.50 X 18].

The instalment amount will be calculated as follows:

Fixed amount specified at the time of enrolment	:	Rs. 5,000/-
	or	
As determined by the formula	:	{(5,000 x 4) - 12,339.00} = Rs. 7661.00
whichever is higher		

Hence, the instalment amount on April 15, 2022 will be Rs. 7,661/-

Q2. How would maximum Flex SIP instalment be calculated?

Calculation of Flex SIP instalment amount for instance on the date of the 7th instalment i.e. July 15, 2022 (T):

Total units allotted up to the date of previous instalment i.e., June 15, 2022 is assumed as 1,558.675. NAV of the Scheme on July 13, 2022 (T-2) is assumed as Rs. 14/- per unit.

Hence, the market value of the investment as on July 13, 2022 is Rs. 21,821 [1558.675 X 14].

The instalment amount will be calculated as follows:

Fixed amount specified at the time of enrolment	:	Rs. 5,000/-
	or	
As determined by the formula	:	{(5,000 x 7) - 21,821.00} = Rs. 13,179.00
whichever is higher, subject to 2 times the initial instalment amount		

Hence, the instalment amount on July 15, 2022 will be Rs. 10,000/-.

Q3. How would the Flex SIP instalment be calculated vis-à-vis total enrolment amount?

In the above illustration, the total enrolment amount for Flex SIP is Rs 1,80,000 (5000 X 36 months). If the total amount invested in Flex SIP till the 34th month is Rs 1,77,000, then the 35th instalment will be Rs. 3000 (Rs. 1,80,000 – Rs. 1,77,000) and the Flex SIP will cease.

12. An investor has an option to choose from 5 Flex SIP tenures viz. 3 years, 5 years, 10 years, 15 years and 20 years. If a tenure is not chosen, 5 years shall be the default Flex SIP tenure.

The facility offers Monthly Flex Systematic Investment Plan (MFLEX) frequencies.

13. The minimum amount per instalment shall be:

MFLEX: Rs. 500/- and in multiples of Rs. 100/- thereafter

14. Investors can choose any preferred date of the month as SIP debit date (10th is the default date). In case the chosen date falls on a non-Business Day or on a date which is not available in a particular month, the SIP will be processed on the immediate next Business Day. If an investor chooses more than one date for SIP, separate SIPs shall be registered for each such date as per the frequency selected by the investor. Flex SIP shall be processed only through NACH mode.

15. Exit Load, if any, prevailing on the date of Flex SIP enrolment shall govern the investments during the tenure.

16. In the following circumstances, the Flex SIP facility may cease and SIP may be processed for the fixed instalment amount specified by the unitholder at the time of enrolment:

(a) If there is a reversal of any SIP instalment due to insufficient balance or technical reasons; or (b) If there is redemption/ switch-out of any units allotted under Flex SIP. (Units under a Scheme are redeemed on First In First Out (FIFO) basis, irrespective of the mode of allotment).

17. Unitholders can discontinue the facility by giving 10 days written notice to any of the Fund's

Investor Service Centres (ISCs). An investor can place a request for cancellation for any one SIP debit date, in case multiple debit dates are chosen.

18. Top up feature is not available under Flex SIP facility.
